Key Macro stores the "key" in a form of macro. Macro is basically a string of characters that has been assigned to a key. You can use Key Macro to encrypt, decrypt and decode your password. Encrypting/Decrypting Text: Using Key Macros, you can encrypt and decrypt any text. First you need to give your text, then you can give your key. For Encryption, you will get encrypted string. For Decryption, you will get decrypted string. Encrypt Password: Key Macros stores passwords in a form of macro. You can use Key Macro to encrypt your password. Encrypt/Decrypt a File: Key Macros stores the encrypted password of the file in a form of macro. You can use Key Macro to encrypt the file. Key Macro stores the password in a form of macro. You can use Key Macro to decrypt the file. Decrypt Password: Key Macros stores the decrypted password of the file in a form of macro. You can use Key Macro to decrypt the file. How to Use: Open Key Macros and select any file. You will see the source code of the file. Now, just write your desired password in the Key Macro box and click the encrypt or decrypt button. How does Key Macro work? Key Macro has the following features: Quick, Easy and Compact way to encrypt, decrypt text. We all know that we all store passwords in plaintext for obvious reasons. But we still don't like to leave our passwords on the cloud, or we keep it in our browser. The idea of encryption is to change the original data in such a way that even the original sender doesn't have any idea about it. Therefore, it is crucial that the key is not accessible to others. But what if the key is stored on the same device as the data, and the key is unique to that device? Then you're only protecting yourself from other people stealing that device. For example, if your phone is stolen, and it contains your bank account information, you might want to be able to decrypt it. But what if you're at a hackers house, and he has your phone with him? You can still decrypt the file. How to Encrypt a File with KeyMacro: In KeyMacro, the password to encrypt/decrypt the file is the key. You can provide your own key
