Protection of USB drives with USB WriteProtect, the best app for protecting your usb drives from being written on. Protect usb drives with the new write protect of USB drive, a one click program to protect all usb drives! This simple but powerful protection system is just what you need to avoid unauthorised changes to the usb storage volume content. Without write protect protection usb drives are exposed to potential attacks and data could be corrupted. This app was designed to protect all kinds of USB storage devices including but not limited to usb drives, thumb drives, mp3 players, and flash drives. If you are about to remove a usb device for replacement, that's a very bad time to lose your data! Even if the device is protected with the write protect system, accidental power-off during the operation may corrupt the data on the device. The USB write protect system is a simple and easy to use system to prevent usb storage devices from being modified. 1. Launch the program. 2. Press the "unprotect" button on the main interface to remove the protection. 3. Press the "protect" button to add the protection. Note: Users are able to activate and deactivate write protection on their usb drives, with only one click: Please press "Protect" button to activate write protection, or "UnProtect" to deactivate it. When USB protection is activated, the program will change the flag on the drive to prevent unauthorized access. When USB protection is deactivated, the program will restore the flag to allow the drive to be accessed. The USB WriteProtect is a basic protection software that protects your USB drives from unauthorised modifications. Its goal is to prevent unauthorized removal of data from your USB storage drives. A safety barrier for personal information. From time to time, while working on your data, you may have to remove your USB storage device (e.g. USB flash drive) for examination or replacement. And sometimes you may want to prevent anyone else from reading the contents of the drive while you do so. Using USB WriteProtect is a very simple, easy to use, and powerful app. 1. Launch the program. 2. Press

the "unprotect" button on the main interface to remove the protection.3. Press the "protect" button to add the protection.Note:
Users are able to activate and deactivate write protection on their usb drives, with only one
