In Hong Kong, the MTR — or Mass Transit Railway

— has a different system. The MTR allows riders to board trains at the front, from where you can get off when the platform is not full. It's considered a more convenient way to ride the train. But in New York, the train platforms are always packed, and you can usually squeeze in. So what's the difference between Hong Kong and New York? When it comes to getting on and off the train, they're pretty much the same. And the trains are no different either. The MTR uses much smaller trains than the New York subway. Some are the same size as the doors at the Hong Kong MTR station; others are so large, you need to squeeze through them to even get on the train. But inside the train, the difference is in the way the stations are laid out. On the MTR, Hong Kong style, there is one platform for each direction. If there's a train coming in, the door opens and you go down the stairs, get on the train and are out in a matter of seconds. Here in New York, the platforms are built for passengers to stand. What's New In AutoCAD?

Microsoft has a reputation for developing and marketing software based on what the market demands. There have been times where I thought this was going to be the case, and the AutoCAD 2023 team was going to be left to fix the many bugs in AutoCAD released in 2016 and 2017. Fortunately, Microsoft AutoCAD development has been firmly in the hands of talented Autodesk engineers for more than 10 years, and the team has been hard at work to improve on the recently released AutoCAD 2023. The improvements in AutoCAD 2023 include: Markup Import and Markup Assist AutoCAD 2023 marks a major milestone for the AutoCAD application with the introduction of automatic importing and storing of user-provided feedback into your models. This includes text, images, and shapes and is applicable to both command-line and graphical user interfaces. Microsoft AutoCAD Application Team Lead, David Neidel, shared their thoughts on how the team has been able to bring this functionality to AutoCAD 2023, "the functionality in AutoCAD 2023 marks a major milestone for the AutoCAD application. By capturing user-provided feedback in design models, it's

possible for users to incorporate design feedback into their models without requiring additional work. There are a lot of benefits to be gained from this, including: Speed and ease of use (no longer need to manually enter text or image data into a model) (no longer need to manually enter text or image data into a model) Reduction of design iteration (incorporating user feedback in the drawing at the outset will reduce the number of iterations in the design process) (incorporating user feedback in the drawing at the outset will reduce the number of iterations in the design process) Improved communication with stakeholders (users can annotate model drawings, including photos and PDFs, to send to them with a single click) (users can annotate model drawings, including photos and PDFs, to send to them with a single click) Design confidence through provenance (the entire drawing history can be viewed and documented) Automatically import and store user-provided feedback in a design model. Any feedback received, such as text, images, or geometry, can be imported into a design model at any time. You can annotate a design model or send feedback to stakeholders at any time.
