The auction topped all previous 5-year notes, and was 5% over the previous 5-year record, according to the Treasury. The yields on the notes were also 3 basis points over the previous 5-year note. The steady growth in the U.S. debt has been a source of concern for economists. Most central banks have attempted to tamp down the appetite for U.S. debt with special securities called TIPS (Treasury Inflation Protected Securities). Rising government debt and inflation risk have raised the pressure on the Fed to continue the unwinding of its \$4.5 trillion balance sheet, which is the largest asset purchase program ever undertaken by a central bank. A slowdown in Chinese growth has also pushed the Fed to keep reinvesting its assets. The Fed is now near \$2.2 trillion in its balance sheet. After it ends its balance sheet expansion, the central bank will still have \$4.1 trillion in assets and will likely continue to buy assets with open market operations. Yellen said that the economy is operating well below capacity and the Fed believes that the current stimulus programs are important for strengthening the recovery. In response to a question on whether the central bank has given enough consideration to the gradual unwinding of its balance sheet, she said that the central bank has always taken gradual approach to policy changes. "It is important to maintain a gradual pace of adjustments, so that we are not surprised by negative outcomes, but we are not taken by surprise by positive ones, either," she said. Meanwhile, Chinese policymakers have expressed concerns over the high level of U.S. debt. After
