Networks AutoCAD and AutoCAD LT can communicate with Autodesk ReCap (a CAD reporting system) through the use of the back-end scripting language ReScript. They can also communicate with other third-party systems using Intergraph's R/Cad SDKs. AutoCAD supports communication with the social networking site Facebook through AutoCAD's Facebook Connect plugin. Users can connect to other CAD systems through the use of the DWG Converter program, Autodesk Design Review, or Inventor. Software rebranding and new features AutoCAD LT 2.1 (released 2013) was the first release to drop the "AutoCAD" brand. The product has since been renamed to Autodesk Design Suite. Its marketing has emphasized the new digital 3D workflow, while highlighting features like drawing bookmarks, Raster to Vector conversion, and more. AutoCAD 2017 and AutoCAD LT 2017 were released in 2016 and was named to the "Top 100 Products for Professional CAD Users in 2016" list by International Data Corporation. The software was released to be compatible with the Windows 7 and Windows 8 operating systems. AutoCAD and AutoCAD LT used a new 64-bit architecture, based on DirectX 12, OpenGL, and the kernel object layer (KOL). This was a major reworking of the code base, to reduce the size and improve the performance of the software. AutoCAD 2017 offers a selection of more than 15,000 functions. For instance, the Ability to Annotate Tools feature enables the annotating of objects with dimension lines, notes, and text. It is also possible to annotate 2D drawings and 3D models with photos and videos. As of December 2016, more than 1.4 million CAD technicians used AutoCAD 2017. In October 2016, Autodesk released AutoCAD 360, which allows users to create 360-degree VR models and create 360-degree images. AutoCAD LT 2018 was released in October 2017. It was described as "a new era of productivity" for the software. Improvements in the user experience, enhanced cloud integration, and a new PDF exporter were some of the changes. What's New In AutoCAD?

AutoCAD 2023 adds new support for importing and integrating paper-based and electronic-based feedback in AutoCAD drawings. For instance, print or fax a list of comments from a paper-based document (e.g., PDF), and immediately add these comments to your AutoCAD drawing, creating a convenient, interactive, paperless workflow. Or, insert your electronic-based feedback (e.g., a spreadsheet of feedback comments) directly into your AutoCAD drawing. You don't have to manually import the feedback data, and there's no need to generate a new drawing. You can edit and import your electronic feedback from multiple locations, such as a text file or spreadsheet, and use it as you work in AutoCAD, saving time and avoiding inaccuracies. Rapidly Send and Incorporate Feedback: Rapidly send and incorporate feedback from paper-based or electronic-based documents such as spreadsheets, text files, PDFs, and even drawings. This is a significant new capability. Just print or fax a list of comments and add the feedback directly to your drawings. (video: 1:15 min.) Work efficiently and effectively with all types of feedback documents: Import feedback from any type of paper-based or electronic-based document, including but not limited to: Paper-based documents PDFs (Acrobat or Portable Document Format) Text files Spreadsheets SketchUp models Elevated text files (separate text file) PDF/X-1A files (separate text file) Paper-based feedback documents are typically generated by a printing or graphics lab, or by a customer or collaborator in response to one of your drawings. Electronic-based feedback documents are typically generated by a customer or collaborator in response to one of your drawings. Examples include email, instant message, web form, and form/spreadsheet. Import from any document type. For example, from a spreadsheet you can rapidly import a list of comments and incorporate these comments directly into your drawing. You can do the same for any other type of feedback document. Rapidly Incorporate Feedback from Paper-Based or Electronic-Based Documents into AutoCAD drawings: Import feedback from any document type and rapidly incorporate the feedback into your drawing without additional drawing steps. All comments are immediately added to the drawing, and you can view and
