Contents Beginnings In early 1982, Susan Ferrier, then an independent graphic designer, attended a trade show at the Super Bazaar in San Francisco where she heard Bill Gates, co-founder of Microsoft, talk about his company's plans to develop a program for the Apple II computer. He had been impressed by Edward Bresenham's line drawing algorithm for an Apple II game called Chess, and was anxious to get a chance to make use of it. The algorithm was the basis of the Bill Gates version of Chess, and Bresenham was a well-known figure at Apple, known for his pioneering work on the original Alto. That evening, Susan pitched him on her new program that drew line drawings with line algorithms based on Bresenham's work. (It was her Apple II version of a well-known game called "Polar", which she'd made for school years earlier.) But Susan didn't have any of the required skills to make a program for Bill Gates. So she wrote it herself. As she put it later, "I got a letter from Bill Gates saying he would pay me if I could make a line drawing program for Microsoft for the Apple II." The first few months were a struggle, but eventually her line drawing program was finished and ready for testing. Susan had it assembled on a disk for Bill to look over, but a month passed and she hadn't heard anything. She guessed they had given up on it. Susan's second effort was a bit different. This time she had written her program for the PC (Intel 8080 and Zilog Z80 microprocessor), and she called it "Chart," named after the first word she typed in the program. Bill's interest was rekindled, and she was contracted to make two versions of Chart. Initially Bill gave Chart the same sort of features as Chess, and the two programs competed against each other. AutoCAD began development on its new line drawing engine in late 1982. Because its new engine worked only with line drawings and not with solids, the first version of AutoCAD had no capability to create two-dimensional (2D) drawings, a major shortcoming of previous CAD programs. This was rectified in 1983, when the "line" symbol (l) was introduced, as an alternative to the l character in text. This symbol would later become known as a "bar". The first incarnation of AutoCAD was only for the

House Bill 1186 would require all drivers to buckle children under the age of 4 into child safety seats. They would also require children under age 4 to ride in a child safety seat or restraint system that meets current Federal Motor Vehicle Safety Standard 108 or higher. Failing to provide a child safety seat or safety restraint system would be a Class C misdemeanor, with a potential fine of up to \$500, for the first offense, and a Class A misdemeanor, with a possible fine of up to \$4,000, for the second offense. The bill would also require motorists to install child safety seats if the child is not already wearing a seat belt.
