Bomber League is a great multiplayer game in which you have to destroy the blocks in order to get to the next level, but do not underestimate your opponent or before you know it you can find yourself on your last leg. At the end of each level you have a bonus time that will affect the next level. You can pick the mode: • Death Match: There will be no breathing room and you'll have to destroy the blocks to get to the end level. • Last man Standing: You'll have to survive the blocks and touch the end point of the map • Team Death Match: You'll have to destroy the blocks and get to the end by yourself • Free for all: Everyone starts at the same level and can go up or down

depending on how you kill and how you play! The rules: • Special abilities will be used based on points. • The last special ability earned after the round will be the one used in the next round. • You will be able to earn more points by doing special actions called "profiles." They are split into positive and negative profiles. • Do not combine profiles, if your skill is the same you can choose only positive or negative profiles • You can only have one profile, if you want to have multiple ones choose one to use and forget about all the other. • You must start the game in an activated profile • You will receive the points collected during the round. • If a player is inactive for more than 5 minutes, his profile will be triggered and he will have to collect the points earned by the rest of the players. • If a player leaves the game for a period higher than 5 minutes, the active players will take over his profile and the points will be stored on a separate list until the player is back • You will be able to see how many points you can earn

depending on the time you have left and the level, they will tell you exactly where you are so you can decide what to do and if you can even try to make it to the next round. • The points will be added up at the end of the round, but they will not be added to a different player, they will be added to the one who won the game. • At the end of each round, the winner will be decided only on points. • For every point you get in a single level, you will get an additional effect and bonus time, the player who has
