The sound of any action movie is always cheesy -- it is supposed to be. And Star Wars should be no exception, just as it is one of the most beloved science fiction franchises of all time. Even though all of the recent sequels have been pretty good, I consider the original film franchise to be the best. Given that, it was a pretty big surprise when I heard about a reboot of the film series earlier this year. Ever since then, I've been patiently waiting for the first trailer to come out. Well, with the release today of the first trailer for The Force Awakens, it finally happened. Take a look! Now we know what the film will be about, what the plot is, and what the cast will be like. This trailer is only for the first film of the new trilogy, so there will be a lot of time between it and the second and third ones. The first teaser film itself was nice but not nearly as good as I was hoping for. Now we finally have a trailer that's awesome, so put on your "Star Wars" pants and enjoy! If so, then you'll love the short films produced by the company. It's like you're watching a Pixar movie, in a way. Many of them include music, too, and other little extras. Most of them are still very entertaining; just watch what you're aa67ecbc25

Q: Can I find locations for a river which may have been caused by fracking? I'm living in an area where a river has suddenly appeared in the middle of nowhere. I've noticed nothing unusual with the water quality, and it's not a large river by any means. Where can I find out if the appearance is unnatural? I'm concerned because it's upstream from a location where they've been fracking water.

A: This is a common form of water pollution. In my area, the wastewater from a dry cleaning plant can occasionally end up in rivers by the former owner flooding and releasing it. I would test to see if there is any hint of oil in the water.

Root canal treatment of primary teeth. Tooth root canal treatment has been researched since the 19th century and the success rate of endodontic treatment of immature permanent teeth has increased significantly. However, pulpitis caused by trauma in primary teeth is more prevalent than in permanent teeth. The aim of this study was to evaluate the success of endodontic treatment for primary teeth in terms of a) pain relief and b) the condition of the treated tooth. This study was performed on four-to-eight-year-old children who had been previously admitted to a pediatric clinic because of pulpitis. Pain on palpation, percussion, and temperature had been present before the patients had been admitted. An endodontic treatment (RCT) was performed on the affected primary tooth. All children were followed up for six months. In this follow-up period, two of the three children who had a class I crown on the tooth, one of the four children who had a class II crown on the tooth
